LISTENING IN ON CREEPY CRAWLIES!

Spiders are unique animals that help us understand natural selection, animal behaviour and mating practices—all important things that influence mating behaviours and life history traits. **See black widow spiders and learn more about spiders from Professor Maydianne Andrade every 15 minutes from 11 a.m. -12 p.m.**

Maydianne Andrade is a professor in the Department of Biological Sciences at University of Toronto Scarborough and Vice Dean of Faculty Affairs & Equity. Maydianne splits her time between her administrative appointment and her work in the Andrade Lab, where she studies black widow spiders in the areas of biodiversity, ecology and evolution, and sensory biology and behaviour.
