2.0 INTRODUCTION AND BACKGROUND

2.1 Introduction

The Toronto Zoo requires the services of a qualified and experienced Proponent / Consultant to advise and develop a strategy for the implementation of dynamic pricing for the Toronto Zoo. As may be applicable, Proponents should provide a separate quotation for any software (web-based or otherwise) work required for the development of the specific algorithm application for analysis of the current and historical data considered in producing the information necessary to result in real time price adjustments for the Toronto Zoo on a periodic basis (daily, weekly, seasonally, or otherwise), based on factors such as weather, historical attendance, featured exhibits or animals, attractions available, special events, rides & adventures, etc., or other factors identified by the Proponent / Consultant. Additionally, particular emphasis and detail should be provided on the Revenue Management tools provided and utilized.

2.2 Background

The Toronto Zoo opened in 1974 and is Canada's premier zoo and one of the top 10 zoos in the world. The Zoo is fully accredited by the Canadian Association of Zoos and Aquariums (CAZA) and the Association of Zoos and Aquariums (AZA). The Toronto Zoo is located on approximately 700 acres of land in the Rouge Valley on the north east corner of the City of Toronto and is home to over 5,000 animals, many of which are threatened or endangered species. The Zoo is a not-for-profit and is visited by approximately 1.3 guests annually. The mission of the Zoo is to be a living centre for education and science, committed to providing compelling guest experiences and inspiring passion to protect wildlife and habitats. Its vision is to be Canada’s national leader in saving wildlife to ensure the rich diversity of nature for future generations. The Toronto Zoo is an agency of the City of Toronto, governed by a Board of Management.

2.3 Scope of Work

As may be applicable, Proponents should provide a separate quotation for any software (web-based or otherwise) work required for the development of the specific algorithm application for analysis of the current and historical data considered in producing the information necessary to result in real time price adjustments for the Toronto Zoo. Additionally, particular emphasis and detail should be provided on the Revenue Management tools provided and utilized. The minimum requirements of this engagement are outlined in the expectations of the Proponent / Consultant set out below:

2.3.1 Review of current environment to assess viability and ease of integration of dynamic pricing methodology into existing system(s).
2.3.2 Review of all necessary historical data required to develop Dynamic Pricing algorithm and Revenue model with the objective of revenue maximization.
2.3.3 Identification of variable factors to be incorporated into the Algorithm.
2.3.4 Identification of all constraints of existing system(s) in accommodating Dynamic Pricing and propose solution.
2.3.5 Identification of interdependencies of other Zoo system(s) impacted by Dynamic Pricing and propose solution, as applicable.
2.3.6 Develop a detailed project plan for each phase of the project from initial review of requirements; development of Algorithm; Revenue Maximization model; systems design, modification, and integration with existing Zoo applications; implementation; etc., and provide a corresponding cost estimate to complete each phase through to full implementation.
3.0 CURRENT ENVIRONMENT

The Zoo currently utilizes a peak / non-peak seasonable pricing methodology strategy with an increased prices from May until Thanksgiving weekend. The significant limitation of peak / non-peak pricing is that there is no flexibility to adapt to changing conditions. Alternatively, it is anticipated that Dynamic Pricing with an appropriate algorithm adapted to the specific criteria of the Toronto Zoo will overcome many of the general limitations of seasonable pricing and result in revenue maximization. The current point-of-sale/ticketing system (ADMITS/MS-RMS) handles all individual and group admission transactions, onsite and online, and sales and redemptions of any other user-fee products as defined by management. In addition to the admission financial transactions, at full or discounted value, the system also as a group reservation database and periodic attendance tracking system. The proposed Dynamic Pricing system must have the capability for full integration with the Zoo’s admission system (ADMITS/MS-RMS) and its financial system (MS Dynamics GP) on a daily basis. A two-way integration with the Zoo’s current CRM database is also required, firstly, CRM database (MS Dynamics CRM) houses member visitation tracking as captured by the point-of-sale; secondly, point-of-sale records need constant updating of member activation and deactivation to correctly admit only members with active membership.
